

April 2015

The other day we had a bird make a perfect bombing run on one of our Sidewinder cameras installed on top of a 40 foot pole along the I-29 freeway. It landed square in the middle of the camera lens. To be able to clean it off we would have had to send out a bucket truck to be able to get up to the camera and clean the camera lens. The location was difficult to get to so we just waited until the next rain storm and pointed the camera into the rain for a while and when the lens dried, there was no evidence of the dirty deed. Not even an outline or haze. Your hydrophilic self-cleaning glass technology is really impressive.

Thanks,
